WHAT SHOULD I EXPECT BEFORE, DURING AND AFTER A PROCHONDRIX CR PROCEDURE?

Before the procedure, your physician will provide you with medication to minimize any potential pain. During the procedure, your surgeon will initially remove your damaged cartilage, followed by placing ProChondrix CR into the affected area. After your surgery, rehabilitation will be prescribed based on the size and location of your cartilage injury.

WHAT ARE THE POTENTIAL RISKS OR SIDE EFFECTS OF A PROCHONDRIX CR PROCEDURE?

Cartilage replacement surgery is a relatively safe procedure. The surgery is performed in an operating room located in either a hospital or a surgery center. In most cases, you will not need to stay overnight. General surgery risks should be discussed with your physician.

This brochure is designed to provide an overview of cartilage issues and treatments specific to ProChondrix CR. If you have additional questions, speak with your physician as they will determine the type of treatment that is appropriate for you.
What is ProChondrix CR and how does it treat cartilage injuries?

ProChondrix CR is a product used to repair or replace your damaged cartilage. Repairing cartilage may help relieve your pain symptoms and improve the function of your affected joint. ProChondrix CR is a therapy that uses living cartilage prepared from a deceased tissue donor (called an allograft). The donor and the tissue used to produce ProChondrix CR are extensively tested to ensure that it is safe.
